

12 March 2013

Dear Congress, House Ways and Means Committee, Working Group(s),

Respectfully, our system of taxation is unfair, burdensome and complex, especially for income taxes. I submit that these few goals should be not only seriously considered but implemented ASAP to simplify and be fairer:

1. Implement a flat tax, period. Everyone is served by the government the same, everyone should support it with their income tax the same. The more you make the more you pay, no limit on how much you make is taxed. And no deductions, pay the flat rate on every dollar earned.
2. Do not tax businesses. Businesses then should be able to lower their overhead and costs and hence their prices to consumers. No business tax would attract more business and existing businesses to do more at home thereby creating more jobs.
3. Federal Government to immediately stop borrowing and printing money, live within your means, only spend what is received through the flat tax. Period. End of discussion.

To pay off our existing debt then implement a special additional flat tax of 1%, of course "you'll" have to figure out what if any interest the investors might receive in order to create an amortization schedule with an acceptable time frame to pay off the debt. And once the debt is paid off the special tax ends. Forever. Period.

Many of us get what has been and is happening and we don't like it. Very soon many more will also realize it and they will not like it either. Please fix it now.

Sincerely,  
Randy Paulson
